Occupying the space at the intersection of the counseling field and modern technology can be an overwhelming and complicated endeavor.

This training program will provide a comprehensive overview of the emerging counseling delivery models (enhanced by modern technologies) and the related challenges to legal and ethical practice, supervision, and the ever-evolving practice of professional counseling.

Participants will be presented with up-to-date information on the advantages and challenges of these models and introduced to the exciting concepts related to the enhanced delivery of counseling services and supervision through technological advanced.

Program Objectives:

Objective #1: Participants will learn about emerging models of delivering counseling services utilizing recent technological advances including video counseling and supervision practices, subscription-based counseling models, and future trends developing in the field.

Objective #2: Participants will better understand the tricky legal and ethical issues surrounding the use of technology as it applies to the delivery of professional counseling, including the benefit and risks of this practice, as well as the evidence-based literature of these counseling modalities.

Objective #3: Participants will learn more about the strengths, limitations, and various technology platforms related to the application of clinical supervision in the counseling field. Updated information will be provided on Ohio counseling licensure requirements regarding supervision utilizing nontraditional methods.
